PROFESSIONAL SUMMARY

Full Stack Consultant with 3.9 years of experience designing and developing scalable web applications and enterprise integration solutions. Strong expertise in frontend development using React.js and Vite.js, with solid experience in backend development using Python Flask and Node.js Express.js. Skilled in building RESTful APIs, database design and optimization using PostgreSQL and MongoDB, and implementing data-driven dashboards with real-time visualization. Experienced in deploying and managing applications using Azure DevOps and Azure App Service. Hands-on experience in Mendix low-code application development and enterprise system integrations with Teamcenter, MS Dynamics, Jira, and Odoo.

TECHNICAL SKILLS

Frontend: React.js, Vite.js, HTML5, CSS3

Backend: Python Flask, Node.js, Express.js

Database: MongoDB, PostgreSQL

Low-Code Platform: Mendix Studio Pro, Microflows, Domain Models, Marketplace Connectors

Cloud & DevOps: Azure DevOps, Azure App Service, Azure Blob Storage, CI/CD Pipelines

Tools: Git, Figma, Power BI

Architecture: RESTful APIs, Microservices Architecture, System Integration

Other: Dashboard Development, Teamcenter Integration, Data Analytics, Data Processing, Data Visualization

WORK EXPERIENCE

Mavenberg Innovations India Pvt. Ltd., Bangalore

Jul 2022 – Present

Consultant — Consultant Trainee — Intern

- Spearheaded end-to-end creation of the License Usage Insights platform for Teamcenter.
- Built interactive dashboards using React.js and Recharts for real-time license tracking and denial analytics.
- Engineered secure backend services using Express.js and Flask to power RESTful APIs.
- Architected MongoDB schemas ensuring scalability and high-performance data access.
- Configured Azure Blob Storage for secure document lifecycle management.
- Automated CI/CD deployments using Azure DevOps pipelines.
- Crafted intuitive UI/UX prototypes using Figma to enhance usability.
- Optimized TCXML data transformation workflows for analytics visualization.

PROJECTS

LUI – License Usage Insights

Present

- Architected a full-stack solution to monitor and optimize high-value software licenses such as Teamcenter.
- Crafted responsive frontend interfaces using React.js aligned with Figma prototypes.
- Constructed real-time analytics dashboards for usage tracking and denial pattern analysis.
- Established secure authentication and role-based access control mechanisms.
- Configured MongoDB and Azure Blob Storage for scalable and secure data operations.
- Streamlined CI/CD release cycles through Azure DevOps automation.

Multiple Application Integration using Mendix

Bangalore

- Developed a centralized integration solution using Mendix to connect MS Dynamics, Jira, Odoo, and Teamcenter.
- Aggregated Engineering BOM from Teamcenter, Production BOM from MS Dynamics, engineering status from Jira, and inventory data from Odoo.
- Designed and implemented end-to-end integrations between Mendix and multiple enterprise applications.
- Configured data mapping between Teamcenter EBOM and MS Dynamics Production BOM for consistent product structure representation.
- Developed modular microflows for each system and combined them into a central orchestration microflow.
- Implemented logic to merge and compare data across systems using looping mechanisms for component-level validation.
- Built a dynamic Mendix dashboard to display component details, engineering status, stock availability, and risk indicators.
- Enabled search functionality to retrieve complete product insights using Item Number.
- Developed real-time risk analysis based on engineering progress and inventory shortages.

- Ensured data consistency, error handling, and optimized performance for multi-system integration.

Teamcenter Integration using Mendix

Bangalore

- Implemented integration between Mendix and Teamcenter using the TC Connector available in the Mendix Marketplace.
- Configured the Teamcenter TC Connector to establish secure connectivity with Teamcenter.
- Implemented functionalities to search, create, and manage Teamcenter items through Mendix.
- Developed features to retrieve and display item structures and BOM details within the Mendix application.
- Designed microflows to handle API interactions and data transformation between Mendix and Teamcenter.
- Ensured secure communication and proper error handling during integration processes.
- Tested and validated end-to-end integration workflows for accuracy and performance.
- Collaborated with backend and PLM teams to ensure correct configuration and data mapping.

Learning Management System – Mendix Application

Bangalore

- Developed a full-featured Learning Management System using Mendix to streamline training and learning processes.
- Designed and developed scalable domain models, microflows, and reusable UI components using Mendix Studio Pro.
- Built role-based access control for Admin, Trainer, and Trainee users.
- Implemented module management features for Trainers to create modules, upload learning materials, and assign modules to Trainees.
- Developed assignment workflows including upload, download, and submission functionalities.
- Created dynamic dashboards for Admins to monitor module status such as Not Started, In Progress, and Completed.
- Enabled Trainers to track trainee progress and performance for assigned modules.
- Followed responsive design best practices to deliver a user-friendly application.

MavenDX Analytics – Product Development

- Engineered a Flask service to transform complex TCXML data into structured analytical models.
- Exposed optimized REST endpoints for seamless frontend-backend interaction.
- Orchestrated a React.js interface embedded with Power BI for dynamic PLM reporting.
- Enabled live data refresh through event-triggered backend processing.
- Enhanced reporting precision and minimized manual analysis workload.

T2C – Teamcenter to Cloud Platform

- Conceptualized application workflows using Figma wireframes and prototypes.
- Assembled modular React.js components for responsive and scalable UI.
- Constructed Flask APIs to facilitate secure cloud data transformation.
- Optimized schema analysis services for efficient Teamcenter module reporting.
- Accelerated cloud migration by minimizing manual transformation processes.

Dashboard Development – TeamcenterX to QAD

- Produced interactive UI mockups aligning technical and business requirements.
- Assembled reusable frontend modules ensuring maintainable architecture.
- Delivered data-driven dashboards visualizing transaction status in real-time.
- Strengthened monitoring reliability through transaction retry management features.

EDUCATION

PSG College of Technology, Coimbatore

2022

Bachelor of Engineering – Production Engineering Sandwich

AWARDS

- **You Made the Difference** – 2025
- **Above and Beyond Award** – 2023

CERTIFICATIONS

- Mendix Rapid Developer
- Microsoft Azure AZ-900
